

Revolutionizing Courtroom Control & Monitoring

JAVS Control Dock serves as a web-based portal to your JAVS recording system. With its touch-driven interface, you can effortlessly manage and route all audio & video components. This user-friendly portal is accessible on desktop computers as well as certain mobile devices, providing an unparalleled level of convenience in maintaining complete control over your courtroom operations.

Control Dock Features

Multi-User Licensing

Users can be assigned to different rooms or locations, ensuring that everyone has access to the control options they need.

Role-based Interface

Ensures that each user sees only the controls relevant to their individual role.

Real-Time Captioning

Provides real-time speech-to-text captioning for court participants. Creating access to those with hearing impairments.

Live Video View

Nested view within your control. Ability to see live video on your mobile device, and can even go full screen.

Wired & Wifi Connectivity

Versatile connectivity options allowing effortless connect & control of your courtroom.

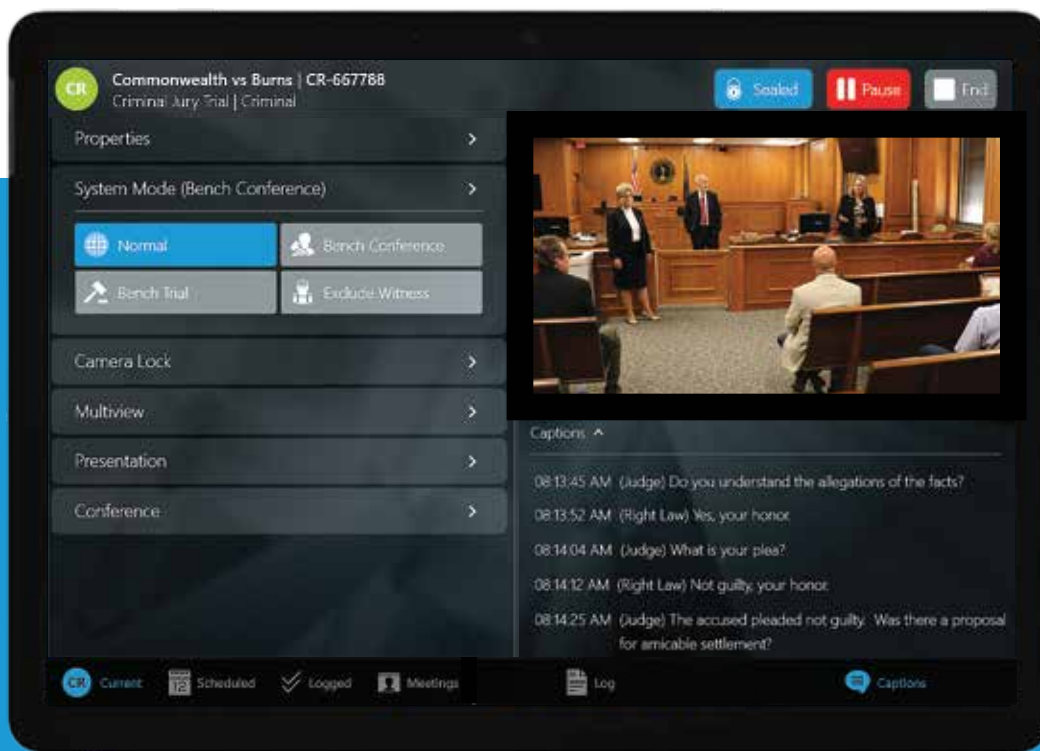

Live Control Modes

Effortlessly control your meetings' camera locks, multiviews and audio with a simple touch or click.

ADA Compliance with Real-Time Captions

JAVS Real-Time Captions provide a textual representation of spoken words, enabling individuals with hearing impairments to comprehend and engage with audiovisual content. As a web-based interface, this display can be configured and shared with operators and guests to deliver captions to those who need it.

Captions not only benefit individuals with hearing disabilities but also can be utilized to provide judges and attorneys real-time streams of a courtroom's discussions. These captions are stored alongside the record file and are time-stamped to be used for searching for specific moments in large volumes of recording, aid in transcription generation, and are extremely accurate even with accents and legal terms.

Through Control Dock's configurable interface, users can access:

- Start/Stop Recording
- Control System Modes
- Control Multiview Layouts

- View All Scheduled & Logged Sessions
- Control Select Video Conference Systems
- Add/Control Zoom Meetings
- Full Screen or Dock System Video Stream

- Un/Mute Video Stream
- View Captions
- Seal Cases
- View Session Properties
